## Wall Mounted Cross with Cable Backlighting

Fiberglass Specialties, Inc is please to announce a new way to backlight wall crosses. Our new "Filament Cord" backlighting system eliminates the need for costly and cumbersome ballasts and neon tubes. Made up of small incandescent lights encased in a clear acrylic cable the new system offers long life, lower installed and operating costs, & no maintenance. Best of all, it comes preinstalled in the cross! FSI's cable light system is UL listed, ready to plug into any wall outlet & can be used indoor or outdoors. The average rated life for the system is 25000 hours or about 8 1/2 years when operated 8 hours per day. If it ever needs to be replaced, a simple screw-driver and a few minutes time is all it takes!

Average Rate Lamp Life— 25000 hours  
5.5 watts per foot (about 143 watts for an 8' wall cross)  
8' Wall Cross draws about one amp of electricity.  
5' power cord plugs into any 120v outlet
